

MS Active Directory

XigmaNAS can get the user database (login and password) from a Microsoft Active Directory (Windows 2000/2003/2008/2012/2016).

In XigmaNAS, you must use the pre-win2000 domain name.

For example if your domain name is 'xigmanas.com', you must set the domain name 'XigmaNAS'

After configure, CIFS/SSH/Unison will rely EXCLUSIVELY on ActiveDirectory authentication for user accounts.
