

# Diagnostics and Logs

## Diagnostics > Log

This page does let you display or download relevant log files about the system. These logs include:

- System
- SSH
- Daemon
- FTP (and FTP transfers)
- S.M.A.R.T.
- Rsync (client, server, and local)
- UPnP
- DAAP

## Diagnostics > Log > Settings

This page allows you to control where logs are stored, and how they are displayed.

## Diagnostics > Information

This group of tabs displays information about the following:

- Disks
- Disks (ATA) (drive capabilities)
- Partitions (fdisk output)
- S.M.A.R.T.
- Space used
- Mount points
- Software RAID
- iSCSI Initiator
- MS Domain
- CIFS/SMB
- FTP
- RSYNC Client
- Swap
- Sockets
- UPS

## Diagnostics > Ping and Diagnostics > Traceroute

These options are used for testing network/internet connectivity.

## Diagnostics > ARP tables and Diagnostics > Routing tables

These pages display connection/networking information.
