

Disks|Mount Point|FCK

Here you see an overview of the FCK page:

The screenshot shows the XigmaNAS web interface. At the top, there is a navigation menu with items: System, Network, Disks, Access, Services, Virtualization, Status, Diagnostics, Tools, Help. Below the menu, the breadcrumb trail reads 'Disks > Mount Point > Fck'. The main content area has three tabs: Management, Tools, and Fck. The 'Fck' tab is active, showing a form titled 'Mount Point Fck'. The form has a 'Disk' dropdown menu with the text 'Must choose one' and 'Databases: /dev/ufs1/Sba6bd4ef47d20b'. Below the dropdown is a checkbox labeled 'Unmount Disk/Partition' which is checked. Underneath the checkbox, there is a warning: 'A mounted disk or partition will be unmounted temporarily to perform the requested action. Users will notice a service disruption when trying to access this mount while the file system check is running.' At the bottom of the form is an 'Execute' button. A red 'Note' section at the bottom of the page reads: 'Note: You can't unmount a drive which is used by swap file, a iSCSI-target file or any other running process!'. The footer of the page contains the copyright information: 'Copyright © 2018 XigmaNAS® <info@xigmanas.com>'.
