

# Disks|Software RAID|RAID 0/1/5|Management

The option to create a GEOM Vinum RAID has been removed from the WebGUI. We encourage users to use ZFS instead.

This menu is for creating a Software RAID 0,1 and 5 based on GEOM [vinum](#).

Note: Depending on the RAID level use one of the following modules:

[Disks|Software RAID|RAID0](#)

[Disks|Software RAID|RAID1](#)

[Disks|Software RAID|RAID5](#)

Important - RAID does not make a backup of your data redundant. Even if you create a RAID array, you should back up your data regularly and save it a different location.
