You can also export or import your firewall rules.

Be aware that blocking your WebGUI port(s) will lock you out of the NAS4Free WebGUI Administration.

Here is an overview of the options you can adjust:

The screenshot shows the XigmaNAS web interface for editing a firewall rule. The page title is "Network > Firewall > Rule > Edit". The "Firewall Rule Settings" section includes an "Enable" checkbox which is checked. The rule number is set to 10100. The action is set to "Deny". The interface is set to "All". The protocol is set to "TCP". The source and destination fields are empty. The destination port is set to 21. The direction is set to "In". The log checkbox is checked. The description is "Deny in FTP". There are "Save" and "Cancel" buttons at the bottom. A note at the bottom left states: "Note: To get detailed informations about writing firewall rules check the FreeBSD documentation." The footer of the page reads "Copyright © 2018 XigmaNAS® <info@xigmanas.com>".
