

System Advanced Command Scripts

Command scripts are used to execute a command

- PreInit - After initializing the kernel
- PostInit - After starting all services
- Shutdown - Before shutting down NAS4Free

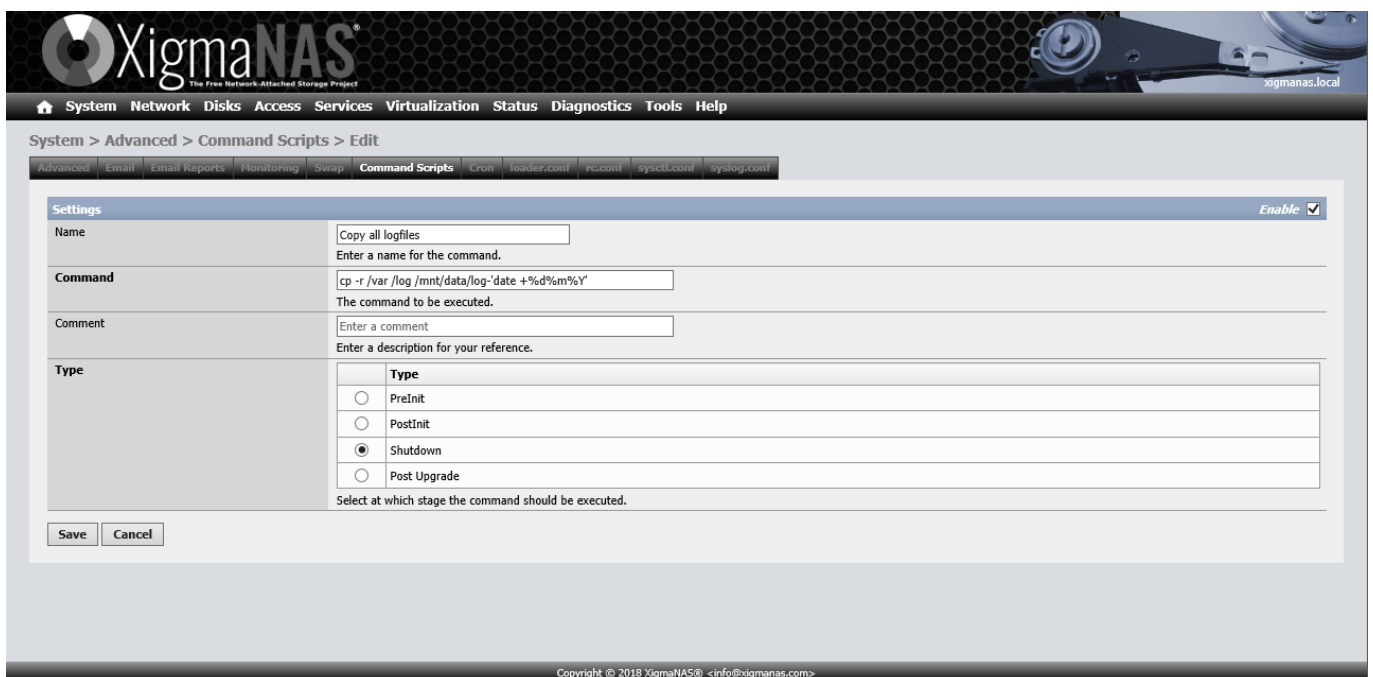

This feature is for advanced user. It isnt needed for the daily work of your NAS4Free.

The example on the screenshots will copy all logfiles to /mnt/data/log-19012017

Click on the icon to create a new Command.

Click on the icon to manage an existing Command.

Other examples:

Command:

`fsck_ufs -y /dev/ada1`

Type:

Shutdown

This will do a filesystem check to the given drive before the system shutdown.
