

System Advanced syslog.conf

overview of my debug settings

The screenshot shows the XigmaNAS web interface. At the top, there is a navigation menu with items: System, Network, Disks, Access, Services, Virtualization, Status, Diagnostics, Tools, Help. Below this, the breadcrumb path is 'System > Advanced > syslog.conf'. A secondary menu contains: Advanced, Email, Email Reports, Monitoring, Swap, Command Scripts, Cron, loader.conf, rc.conf, sysctd.conf, and **syslog.conf**. The main content area is titled 'Overview' and contains a table with the following data:

<input type="checkbox"/>	Facility	Level	Destination	Status	Description	Toolbox
<input type="checkbox"/>	console	info	/dev/console	✓	Firmware info to console (info)	
<input type="checkbox"/>	console	=err	/dev/console	—	Firmware info to console (error)	
<input type="checkbox"/>	console	debug	%/var/log/system.log	—	Firmware info to console (debug)

Below the table are two buttons: 'Toggle Selected Options' and 'Delete Selected Options'. At the bottom of the interface, there is a copyright notice: 'Copyright © 2018 XigmaNAS® <info@xigmanas.com>'.
