

Tools|File Editor

Here we see the file editor page in action:

Editing /etc/fstab is not something you should ever do. I just grabbed it to display so the edit box wouldn't be empty.

The screenshot shows the XigmaNAS web interface. At the top is the XigmaNAS logo and navigation menu (System, Network, Disks, Access, Services, Virtualization, Status, Diagnostics, Tools, Help). Below the menu, the 'Tools > File Editor' page is displayed. It features a 'File Path' input field containing '/etc/fstab', 'Edit', and 'Save' buttons. Below this, there are radio buttons for 'Highlighting: Enabled' and 'Disabled'. The main area is a text editor showing the contents of /etc/fstab:

```
/dev/ada0p2 /of ufs ro 1 1
proc /proc procfs rw 0 0
```

At the bottom of the interface, a copyright notice reads: 'Copyright © 2018 XigmaNAS® <info@xigmanas.com>'.
