

Services

Section 2.6.x is all about the XigmaNAS services that are available in XigmaNAS You are able to setup the desired service by selecting the service of your choice true the service menu on the webgui of XigmaNAS.

The screenshot displays the XigmaNAS web interface. At the top, the XigmaNAS logo is visible with the tagline "The Free Network-Attached Storage Project". Below the logo is a navigation bar with tabs for System, Network, Disks, Access, Services, Virtualization, Status, Diagnostics, Tools, and Help. The "Services" tab is currently selected, and a dropdown menu is open, listing various services such as HAST, Samba AD, CIFS/SMB, FTP, TFTP, SSH, NFS, AFP, Rsync, Syncthing, Unison, iSCSI Target, CAM Target Layer, DLNA/UPnP, iTunes/DAAP, Dynamic DNS, SNMP, UPS, Webserver, MariaDB, BitTorrent, and LCDproc. The background of the interface shows system information, including Hostname, Version, Platform OS, Platform, System, System BIOS, System Time, System Uptime, System Config Change, CPU Frequency, CPU Usage, CPU Core Usage, Memory Usage, Swap Usage, Load Averages, and Disk Space Usage. There are also sections for Databases, Data, Status, Load, and Battery Level.
